

PowerShell Module: CoraSeQuence.Sites

Last Modified on 07/11/2022 2:44 pm EDT

Starting with V10.0, Cora SeQuence has been renamed to Cora Orchestration.

The CoraSeQuence.Sites module includes the functions required to deploy Flowtime and Administration sites.

Function name	Description	Version
Uninstall-CoraSeQuenceSite	Uninstalls a Cora SeQuence site.	9.6
Set-CoraSeQuenceSiteSecurityConfiguration	Configures Cora SeQuence sites for HTTP or HTTPS.	9.4.3
Disable-CoraSeQuenceWebApiCORS	Disables Cross-Origin Resource Sharing (CORS) for all options and all headers on the Cora SeQuence WebAPI site.	9.3
Enable-CoraSeQuenceWebApiCORS	Enables Cross-Origin Resource Sharing (CORS) for all options and all headers on the Cora SeQuence WebAPI site.	9.3
Get-CoraSeQuenceSite	Gets a list of all the installed Cora SeQuence sites	9.0
Install-CoraSeQuenceSite	Installs, reinstalls, and upgrades a Cora SeQuence	9.0
Set-CoraSeQuenceSiteAuthentication	Changes the predefined authentication settings for the Flowtime and Administration sites.	9.0
Set-CoraSeQuenceSiteWCFConfiguration	Configures WCF bindings based on the protocol and authentication type of the Cora SeQuence site. NOTE From V9.4.3 this function is not available, instead use the Set-CoraSeQuenceSiteSecurityConfiguration function.	9.0

Get a list of all functions related to a module

1. On PowerShell, run `Get-Command -Module CoraSeQuence* | sort Source`

Get help on functions

All functions in the Cora SeQuence PowerShell modules contain built-in help.

To get help on a specific function:

1. Run `Get-Help <FunctionName>`
