

Validate the CI/CD Username

Last Modified on 09/11/2022 10:27 am EDT

After you install the CI/CD tool pipelines, you need to check if the CI/CD user configured for each environment has been properly created.

This procedure is usually performed by the CI/CD Admin.

1. Open this URL: <https://<Your Administration Site URL>/cicd/CICDDeploymentService.asmx>
Example: <https://devcicd-admin-demo.corasequence.digital/cicd/CICDDeploymentService.asmx>
2. Click **GetCurrentUserName**.

3. Click **Invoke**.

The XML file should show the CI/CD user that has been defined for the environment.

```
This XML file does not appear to have any style information associated with it. The document tree is shown below.  
▼ <ResponseOutput xmlns:xsd="http://www.w3.org/2001/XMLSchema" xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance" xmlns="http://pmssoft.com/">  
  <Result></Result>  
  ▼ <Messages>  
    <string>Name: CICD User, Username: SeqAnonymousUser, Admin:True</string>  
  </Messages>  
  <Version>9.4.7.0</Version>  
  <Properties/>  
</ResponseOutput>
```

Note

You can have one user for all the environments.
