

Edit CSS styles

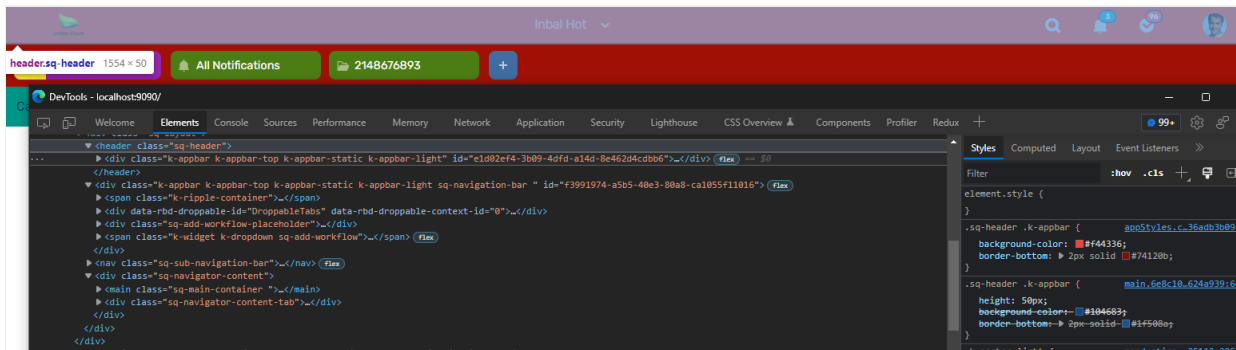

Last Modified on 11/15/2022 8:14 am EST

You can edit existing styles or add new ones to the CSS file, located at `/src/appStyles.css` in the template project.

The CSS file contains predefined and commented sections.

```
1  /* Logo */
2  > .sq-logo { ...
4  }
5
6  /* Header */
7  > .sq-header .k-appbar { ...
9  }
10
11 /* Navbar */
12 > .sq-navigation-bar.k-appbar { ...
14 }
15
16 > .sq-navigation-bar.active { ...
18 }
19
20 /* Navbar Tabs Wrap*/
21 .sq-navigator-tabs .active .sq-tab:before,
22 > .sq-navigator-tabs .active .sq-tab:after { ...
24 }
25
26 /* Navbar Active Tab */
27 > .sq-navigator-tabs ul li.active { ...
29 }
30
31 /* Navbar Tab */
32 > .sq-navigator-tabs ul li { ...
34 }
35
36 /* Navbar Menu */
37 > .sq-navigator-menu-wrapper { ...
39 }
```

Use Chrome Developer Tools to detect HTML DOM elements id, class, and attributes for the CSS selectors.

Watch a [video](#) to learn how to apply common customization scenarios.
