Deep Link Examples

Last Modified on 12/20/2022 6:54 am EST

Overview

Cora Orchestration supports deep linking in URLs, which enables the applications to send the user directly to the specific in-app location. Deep links open a specific URL in a new tab instead of in a new window. It reduces the overhead of managing different windows and improves the user experience.

Currently, there's no deep linking for search queries. For example, */search?q=phrase*.

Examples

Syntax	Deep link example	Description
<Application URL>/wf/<workflowID>	/wf/2148677618	Opens a specific workflow instance. 2148677618 is the workflow ID.
<Application URL>/msg/<messageID>	/msg/2147588810	Opens a specific message. 2147588810 is the message ID.
<Application URL>/act/<activityID>	/act/2183877237	Opens a specific activity. 2183877237 is the activity ID
<Application URL>/a/Default/<dashboardName>	/a/Default/HR/Sales1	Opens a specific dashboard. *Sales1* is the name of the dashboard.
<Application URL>/s/<solutionName>	/s/SolutionSales/	Opens a specific solution. *SolutionSales* is the name of the solution.
<Application URL>/s/<solutionName>/a/Default/<dashboardName>	/s/SolutionSales/a/Default/HotOperations/Ops%20Manager%20Dashboard	Opens a specific dashboard in a specific solution. *SolutionSales* is the name of the solution. *Ops Manager Dashboard* is the name of the dashboard.
<Application URL>/cases/<workflowInstanceID>	/cases/18c1e53c-2fa3-45ae-a0b6-2719875371f7	Opens the *Processes I Started* case list of a specific workflow.
<Application URL>/wfid/<workflowInstanceID>	/wfid/3602ea09-5e8f-4f87-a324-edc546cb0443	Creates a new instance of a specific workflow.
