Azure AD Graph Is Deprecated

Microsoft is deprecating the Azure Active Directory (Azure AD) Graph API after June 30, 2023.

For more information, see this page.

Why is this information important to you?

After June 30, syncing users from the Azure active directory will be possible only with the **Microsoft Graph** API, which is supported from Cora SeQuence V9.8.3.

What should you do?

If your ADSS syncs users from Azure AD, then perform one of the following actions before June 30, 2023:

- Upgrade the entire system to the latest version.
- If upgrading the system is not feasible within the timeline, you can upgrade only the ADSS application to the latest version.
  This option is supported only for V8.8 and later.

> **NOTE**
> After you deploy the ADSS application, remember to grant permission to the App Registrations used by the ADSS application.
> For more information, see the Azure Active Directory Configurations section in this article.

Known issue

Issue	Workaround	Ticket #
When you sync users from Azure active directory without a group filter, users are not associated to their groups.	To make sure that the imported users are associated to their groups, specify the group ID filter when you set up the ADSS application.	56163

This issue will be fixed in V9.9.2 and V10.3, which are due in Q1 2023.

> **IMPORTANT**
> Make sure that you take the required action *before June* 30, 2023.

If you have any questions, contact your Solution Architect or the Support team.
