

# Create a Case Configuration Set

Last Modified on 08/14/2023 12:07 pm EDT

Starting with V10.0, Cora SeSequence has been renamed to Cora Orchestration.

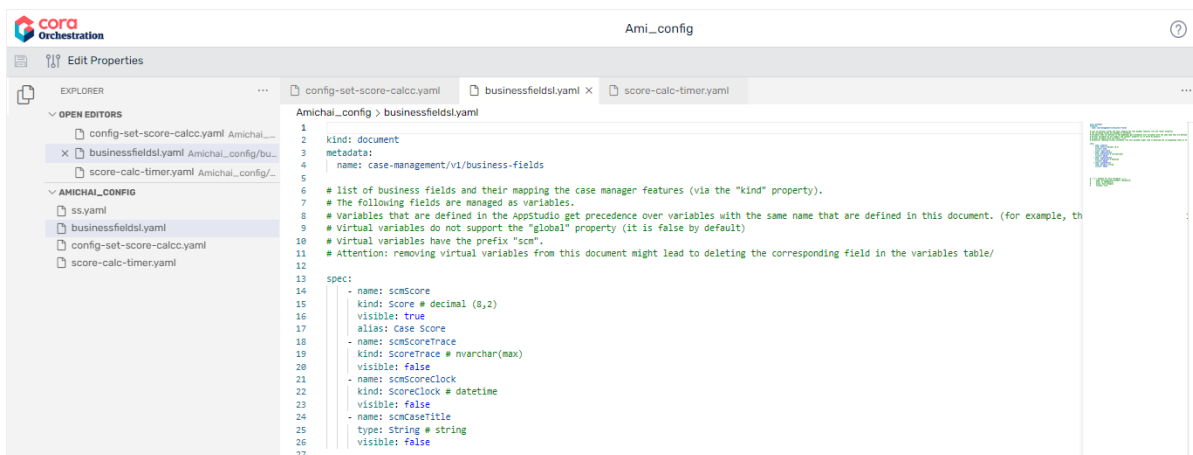

## Overview

A case configuration set (config set or ConfigSet) is a set of predefined conditions, which you can apply to cases in a solution, and based on the fulfillment of the conditions in the criteria, the system automatically performs some actions on the cases.

In V10.4, the case configuration management supports only case scoring functionality for Case Management (Hot Operations) solutions. The case configuration sets are defined to assign weightage and ranks to the cases, based on which the case priority is set.

## Create a ConfigSet

1. In the Administration site, go to **Administration>Global Settings>ConfigSets Manager**.
2. Click **Add ConfigSet**.
3. Add a name to the config set, and then click **Create ConfigSet**.  
A ConfigSet AppStudio opens up in a new tab.
4. In the ConfigSet AppStudio, add configurations in *yaml*, and then save.

## Edit a ConfigSet

1. In the Administration site, go to **Administration>Global Settings>ConfigSets Manager**.
2. From the list of config sets, click the edit icon  for the config set you want to edit.
3. Make the changes in the ConfigSet App Studio, and then save.

## Import a ConfigSet

You can import an existing config set from a ZIP package saved on your system.

1. In the Administration site, go to **Administration>Global Settings>ConfigSets Manager**.
2. Click **Import ConfigSet**.
3. Click **Select**, and browse to the config set ZIP file you want to import.
4. Click **Import**.

After you have created a config set, you need to apply this config set to a solution cases. So, you need to

connect a config set to a solution.  
For details, see [this article](#).
