

Connect a Case Configuration Set to a Solution

Last Modified on 08/14/2023 12:08 pm EDT

Starting with V10.0, Cora SeQUENCE has been renamed to Cora Orchestration.

After you have created a config set, you need to connect the config set to Case Management solution(s) for which you want to apply the conditions.

1. In the Administration site, go to **Solutions**.
2. Open a Case Management solution.
3. In the **ConfigSet Common Tasks**, click **Define ConfigSet**.

4. In the ConfigSet Definition window, choose whether you want to create a new config set, or select an existing config set for the solution.
If you choose to create a new config set, then you can create an empty config set and later edit it to add conditions.
Or, you can select an existing config set from the list.

ConfigSet Definition

ConfigSet Definition

Create New ConfigSet
Create a new ConfigSet and set it as the solution's ConfigSet

Select Existing ConfigSet
Select an existing ConfigSet and set it as the solution's ConfigSet

Select ConfigSet

NorthTeamA

OK Cancel

5. Click **OK**. The applied config set appears in the solution ConfigSet Common Tasks section.
