

Add Custom Messages to Application Log Files

Last Modified on 05/25/2026 7:00 am EDT

V11.2

Overview

As a workflow developer, with the *Write Custom Logs* built-in command activity, you can add logical errors and workflow-specific events to the application logs without relying on the custom code or external DLLs.

Procedure

1. In the Admin site, open the workflow in which you want to add the built-in command.
2. In the workflow, add the built-in command activity.
3. In Process Operations category, select *Write Custom Logs*.
4. Click **Next**.
5. Add Input parameter bindings.
 - message: The message to be written to the application log.
 - logLevel: The logging level from the following existing platform logging levels.
 - Verbose
 - Debug
 - Information
 - Warning
 - Error
 - Fatal
