

Orchestration AI 11.4.1 Release Notes

Last Modified on 09/15/2026 11:52 am EDT

10 SEPTEMBER 2026

Welcome to the Orchestration AI Release Notes.

This update includes some resolved issues.

Resolved issues

Component	Issue	Ticket #
App Studio	Deletion of activities in bulk (multi select) and allowing to disable the Start activity had issue.	5739602
Conversation View	Task items didn't expand when the translation service was enabled.	-
Form Viewer	Post back in Form Viewer had issues when configured as a custom menu item.	-
Semantic Kernel	Library reference for Semantic Kernel connections were incorrect.	-

Deployment

Download the release package from the [Orchestration AI repository](#).

NOTE

If the files you are looking for are not in the repository, then contact [Support](#) to get access to the new repository location and to obtain credentials to access the repository.

There are six pre-built application deployment packages available, depending on the type of application that you are deploying. You install each Orchestration AI application separately.

Site applications	Service applications
- Administration - Orchestration AI portal - WebAPI	- Job Execution Service (JES) - Background Runtime Service (BRS) - Active Directory Synchronization Service (ADSS)

Click [here](#) to see how to deploy pre-built applications.

For more details on installing and deploying applications, see [this article](#).

Check if you need to upgrade your database for this version.

For more information on *database upgrade* and *post-upgrade procedures*, see [this article](#).

Before upgrade, make sure that you update the PowerShell modules to the relevant version.

For more information, see [this article](#).

Click [here](#) to view a sample PowerShell script. Consider this sample for reference only, and do not copy paste from it.

IMPORTANT

Use Microsoft SQL Server Developer Edition for development purposes **only**.

During upgrade, all product application folders are deleted and redeployed:

- Web and App config files are overwritten in each release. You need to reapply your custom configuration settings after the upgrade.
- All custom files located in the application folders are also deleted. Custom files should be packaged as a custom application NuGet.

Files in the central configuration location are not changed.

For more details, see [this article](#).

For details on Orchestration AI platform support, see [this article](#).
