

Orchestration AI 11.4.2 Release Notes

Last Modified on 10/12/2026 12:15 pm EDT

11 OCTOBER 2026

Welcome to the Orchestration AI Release Notes.

This update includes some resolved issues.

Resolved issues

Component	Issue	Ticket #
Deployment hub	UI of the select/deselect components of the deployed package had issues.	5754525
Email editor	The subject text didn't clear when "Use template subject" was unmarked and "No Template" was selected.	-
Recent items	The recent item list appeared blank.	-

Deployment

Download the release package from the [Orchestration AI repository](#).

NOTE

If the files you are looking for are not in the repository, then contact [Support](#) to get access to the new repository location and to obtain credentials to access the repository.

There are six pre-built application deployment packages available, depending on the type of application that you are deploying. You install each Orchestration AI application separately.

Site applications	Service applications
- Administration - Orchestration AI portal - WebAPI	- Job Execution Service (JES) - Background Runtime Service (BRS) - Active Directory Synchronization Service (ADSS)

Click [here](#) to see how to deploy pre-built applications.

For more details on installing and deploying applications, see [this article](#).

Check if you need to upgrade your database for this version.

For more information on *database upgrade* and *post-upgrade procedures*, see [this article](#).

Before upgrade, make sure that you update the PowerShell modules to the relevant version.

For more information, see [this article](#).

Click [here](#) to view a sample PowerShell script. Consider this sample for reference only, and do not copy paste from it.

IMPORTANT

Use Microsoft SQL Server Developer Edition for development purposes **only**.

During upgrade, all product application folders are deleted and redeployed:

- Web and App config files are overwritten in each release. You need to reapply your custom configuration settings after the upgrade.
- All custom files located in the application folders are also deleted. Custom files should be packaged as a custom application NuGet.

Files in the central configuration location are not changed.

For more details, see [this article](#).

For details on Orchestration AI platform support, see [this article](#).
